ABOUT EMERGING INDUSTRIES

The development of emerging industries will unfold a new round of global industrial revolution and global industry and technology transfer. Led by developed countries, emerging industries will be the focus of global industrial restructuring and industry and

technology transfer, setting fresh agendas for global economic cooperation, international trade and investment.

Emerging industries came into being with the invention and application of new technologies in different countries. They take shape through either the industrialization of new technologies or upgrading traditional industries. At the current stage, emerging industries centre on :

New energy

New materials

Energy conservation and environmental protection

Electronic automobiles

Biomedicine

Information networks

High-end Manufacturing

Mordern Service Industry
